Sales & Marketing Funnel Automation

Workflow ID: sales-marketing-funnel-001 | Version 1.0.0 | Status: Ready

Executive Summary

This automated workflow implements an end-to-end sales and marketing funnel spanning lead capture via browser automation, AI-driven lead qualification, multi-tier nurture and Calendly booking sequences, and automated 7-day post-purchase customer retention.

Node 1: Lead Capture [Browser Automation]

Trigger: on_form_submission + on_ad_click | Next: lead-qualification

Monitors lead generation pages (https://ronic-os.example.com/leads). Captures incoming submissions from #lead-form and ad click triggers (.ad-cta-button). Extracts email, name, job title, company size, UTM attribution (source, medium, campaign, referrer), and records data into CRM.

Outputs: lead_id, email, company, captured_at

Node 2: Lead Qualification [LLM Reasoning]

Trigger: on_lead_captured | Next: nurture-conversion

Autonomous LLM reasoning engine assesses incoming lead profile against company criteria. Applies scoring heuristics: Hot (score >= 80), Warm (score 50-79), and Cold (score < 50). Updates lead tier and qualification timestamp in CRM.

Outputs: lead_id, score, tier

Node 3: Nurture & Conversion [Bot Action & Integration]

Trigger: on_lead_qualified | Next: retention

Dispatches automated multi-channel sequences based on lead tier via SendGrid: Hot leads receive immediate demo invitation followed by 24h follow-up and automated Calendly 30min booking. Warm leads receive welcome email, Day 3 case study, and Day 7 soft CTA. Cold leads receive bi-weekly updates. Tracks purchase completed conversion events.

Outputs: lead_id, tier, emails_sent, demo_booked, purchased_at

Node 4: Retention & Customer Success [LLM Reasoning + Bot Action]

Trigger: on_purchase + 7_days_post_purchase | Next: Completed

Automated customer retention engine activates 7 days post-purchase. Analyzes customer usage telemetry, subscription plan, and ARR. Generates personalized onboarding action checklists and relevant upsell recommendations. Automatically alerts Customer Success Managers via Slack if churn risk is elevated.

Outputs: onboarding_tasks, upsell_offer, churn_risk_score
